

All right please

A.S.

25 Wilton Place
Sept 21/99

My dear Gray

After much further consideration
I think that in the Abietinae the
character derived from the male
flower is so constant that we must
keep *Abies* & *Picea* distinct we would
then have

*Anthracium connectivum in appendicem
squamiformem productum*

1 *Pinus*

2 *Cedrus*

3 *Picea* Link. (*Abies* Don)

Anthracium connectivum in appendiculatum vs
viz supra loculo prominens fere glanduliforme
& *Abies* Link. (*Picea* Don including *triga* and
pseudotsuga)

5 *Larix*

I want much any observations you
may have to make on *Coriaria*

Yours truly
George Engelmann
